

PORTNET GOES MOBILE

PORTNET subscribers on the move can still keep up with the latest information on PSA's e-commerce platform by using PORTNET Mobile. This makes PORTNET accessible via PDA, Blackberry, mobile phone or other mobile devices.

Subscribers can track the status of a container on the move, whether the container has left the gate or been discharged from the vessel and so forth. They can get real-time information on the vessel and inform their suppliers or customers accordingly for more efficient planning of resources and better customer service.

PORTNET also now offers FlexiAlert, real-time alerts on time-critical events such as containers shut out, containers for direct delivery or containers discharged. This enables better planning of activities through PORTNET. Subscribers can choose to receive alerts via SMS text message, radio page, fax or email. Users can even choose when they want to receive these notifications, which are pushed to subscribers automatically.

To take advantage of PORTNET Mobile, all subscribers need to do is turn on the GPRS (General Packet Radio Service) or other connectivity options such as 3G, 3.5G or WiFi on their mobile devices and log on to <http://mobile.portnet.com>.

Portnet is developed, owned and upgraded by PSA. Contact PORTNET Customer Service Centre at (65) 6321 2980 or email csc@portnet.com.
